IBM Design

IBM Design Thinking

Human-centered outcomes at speed and scale

“The mission of IBM Design is to create a sustainable culture of design at IBM.”

— Phil Gilbert, GM IBM Design

Topics

Watson

- Cognitive System, augmenting human cognition
- IoT Brain

Watson IoT

- Device and sensor connections and data, augmenting existing human senses.
- IoT Nervous system

Bluemix and Node-RED

- Augmentation enabler
- Connects sensors, devices and gateways to IoT platform
- IoT Senses

IBM Watson

... is a cognitive technology that processes information more like a human than a computer.

IBM Watson

... is a cognitive technology that processes information more like a human than a computer.

COG · NI · TIVE / käg-nə-tiv

(adjective): of, relating to or involving **conscious mental** activities (such as thinking, understanding, learning and remembering)

Why do we need “Cognitive Systems”?

We (humans) can't adapt **fast enough** to keep up with the world we are creating.

“Sensory overload is like watching and listening to 19 TV channels ...
at the same time.”

“Intuitive diagnosis is reliable when people have a lot of relevant feedback. But people are very often willing to make intuitive diagnoses even when they're very likely to be wrong.”

- Daniel Kahneman
2002 Nobel Prize Winner

How does Watson “work”?

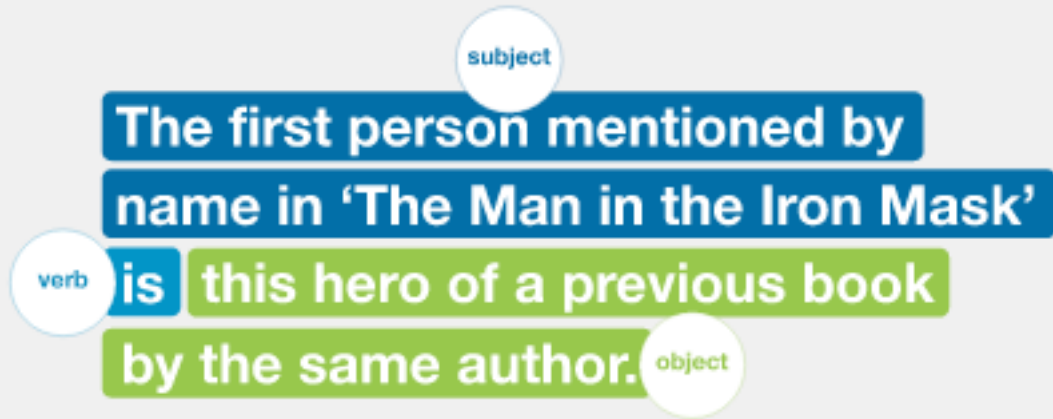

Analyses unstructured data

Uses natural language processing to understand grammar and context

Semantically understands complex questions

Evaluates all possible meanings and determines what is being asked

Presents answers and solutions

Based on supporting evidence and quality of information found

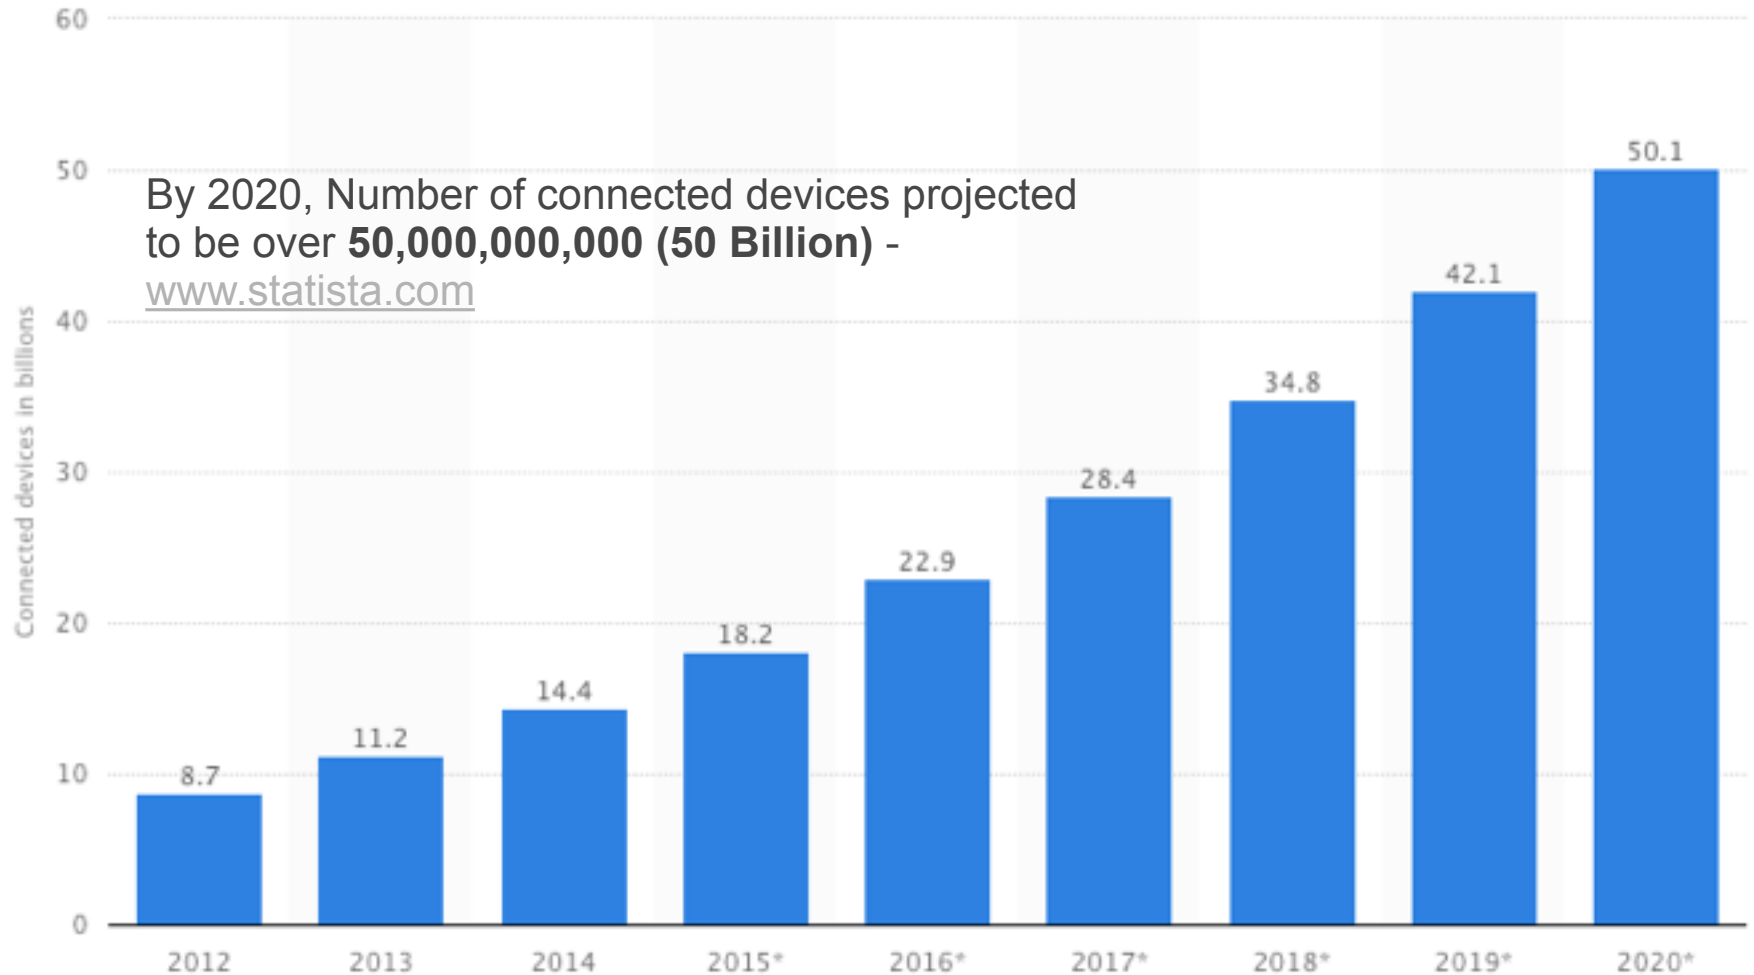

Watson IoT

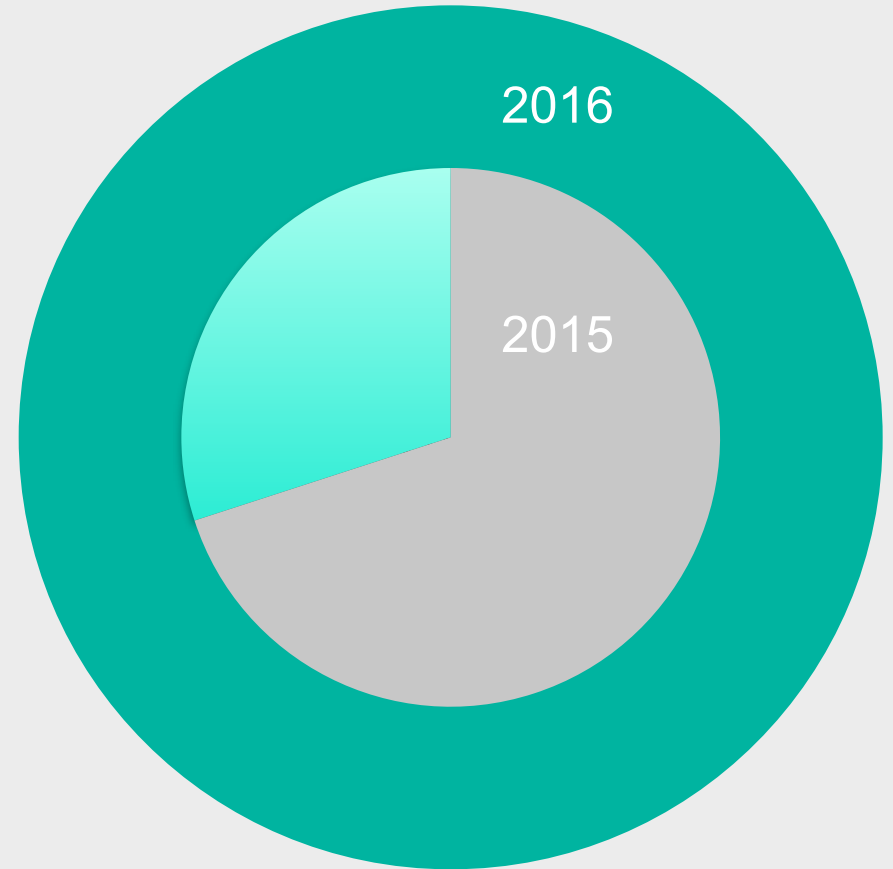

How many connected devices?

By 2020, Number of connected devices projected to be over **50,000,000,000 (50 Billion)** -

www.statista.com

In 2016, the number of connected devices is 6.4 Billion, up 30% from 2015 - www.gartner.com

How much is it worth?

“Potentially \$7.1 Trillion industry and market by 2020”

- IDC, 2015

* Gartner - \$300 billion

Watson IoT Discover and Play Experience

Try our sample app and see live visualizations of your phone's sensor data

You'll need a smartphone and a device with a larger screen.

The main NODE.js application requires a user to register a unique user name and PIN on their laptop or tablet. Once authorized using the correct combination of user name and PIN on the companion smartphone web site, the main application renders a number of realtime visualizations representing the movement of the device associated with that user.

[Play](#)

Watson IoT Discover and Play Experience (Demo)

<http://discover-iot.eu-gb.mybluemix.net/#/play>

Play with our platform now

Connect a networked device to the IBM Watson IoT Platform in IBM Bluemix and watch live sensor data stream into a sample dashboard.

✓ Select your device

✓ Enter your Smartphone information

3 View live data from your Smartphone

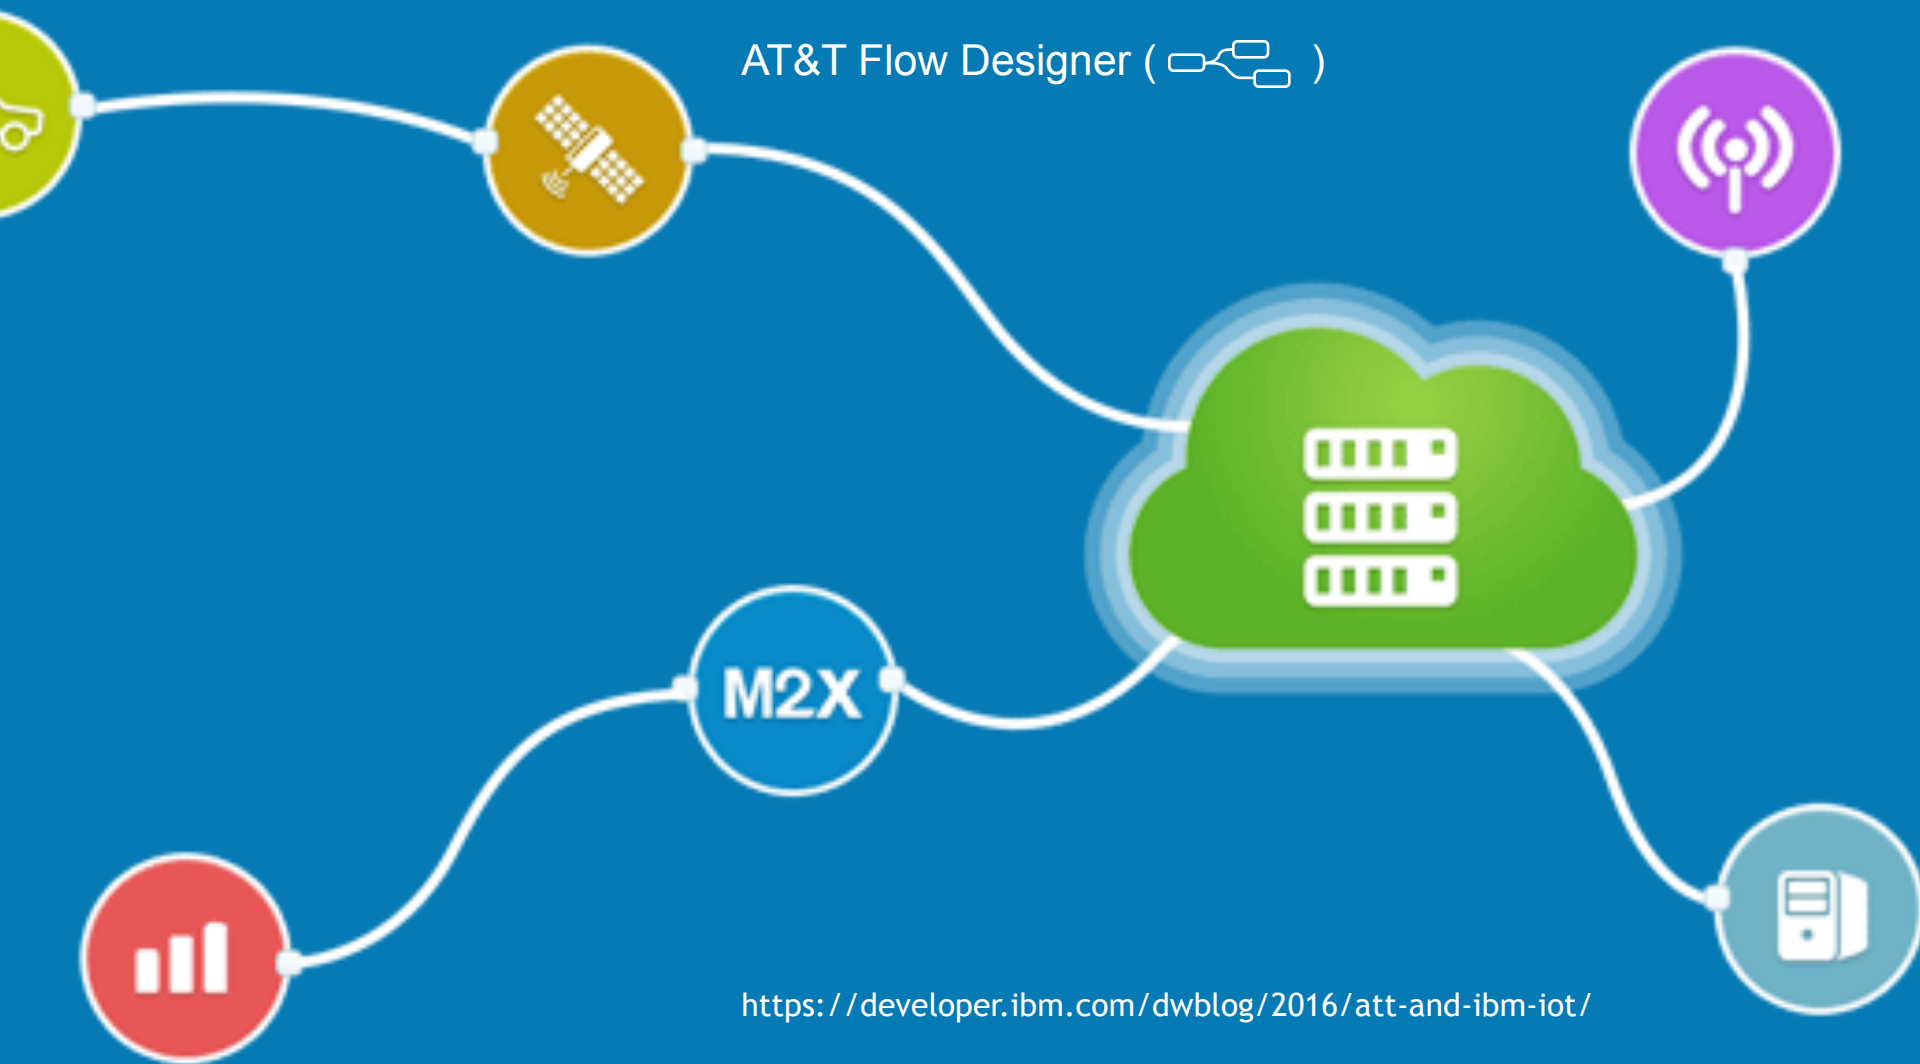

Go to this URL on your smartphone to start the connection

Your smartphone device will connect to the IBM Watson IoT Platform and start sending live data.

DALLAS, TX and ARMONK, NY - 13 Jul 2016: [AT&T*](#) and IBM (NYSE: [IBM](#)) are working together to help businesses accelerate their [Internet of Things](#) (IoT) initiatives. The two companies will combine their unique strengths in cognitive computing and global connectivity to create open standards-based tools on the IBM Cloud to enable developers to more quickly build and implement a wide variety of IoT solutions.

Open standards-based tools allow developers to improve their skills and avoid the churn of learning new tools, which helps protect the investments businesses have made in IoT solution development. As demand for IoT solutions grows, so does the demand for skilled IoT developers. According to the [VisionMobile 2016 Internet of Things Megatrends report](#), nearly 10 million developers will be active in IoT by 2020, doubling the estimated 5 million today. As businesses discover the need to more efficiently develop and bring IoT solutions to market, they must invest in developers to stay competitive.

**ASP.NET Core Cloudant Starter**

Use the Cloudant NoSQL DB Service in an ASP.NET Core application.

IBM

**Internet of Things Platform Starter**

Get started with IBM Watson IoT platform using the Node-RED Node.js sample application. With the Bluemix IoT Platform, you can create and manage IoT devices and applications.

IBM

**IoT for Electronics Starter**

IoT for Electronics is an integrated end-to-end solution (made of multiple services and apps) that allows you to quickly create and deploy IoT applications.

IBM

**Java Cloudant Web Starter**

Use the Cloudant NoSQL DB service with the Liberty for Java™ runtime.

IBM

**Java Workload Scheduler Web Starter**

This application demonstrates how to use the Workload Scheduler service, with the Liberty for Java™ runtime.

IBM

**LoopBack Starter**

This is a sample StrongLoop LoopBack Node.js application, powered by the open source LoopBack framework.

IBM

**MobileFirst Services Starter**

Start building your next mobile app with mobile services on Bluemix.

IBM

**Node.js Cloudant DB Web Starter**

Use the Cloudant NoSQL DB service with the SDK for Node.js™ runtime.

IBM

**Personality Insights Java Web Starter**

A simple Java app that uses the Personality Insights service to analyze text to derive personality traits.

IBM

**Personality Insights Node.js Web Starter**

A simple Node.js app that uses Personality Insights to analyze text to derive personality traits.

IBM

**StrongLoop Arc**

This application is the StrongLoop Arc graphical UI, which includes tools for building, profiling and monitoring applications.

IBM

**Mendix Rapid Apps**

Model driven rapid app platform that allows you to quickly create and deploy web and mobile applications.

Community

**Node-RED Starter**

This application demonstrates how to run the Node-RED runtime on Bluemix.

**Python Flask**

A simple Python Flask application that will get you up and running quickly.

**Ruby Sinatra**

Develop a Ruby web application using the Sinatra framework.

Node-RED

Node-RED

Node-RED is a visual, rapid development tool for wiring together hardware devices, APIs and online services in new and interesting ways to create IoT applications.

Created by **IBM Emerging Technologies** and released as **open source** on GitHub.

Latest version 0.14.6 was released as open source on Github
29 Jul 2016.

Node

Name	SlackHook
Type	http in
ID	40c91d4d.bf36e4

Properties

Provides an input node for http requests, allowing the creation of simple web services.

The resulting message has the following properties:

- `msg.req` : [http request](#)
- `msg.res` : [http response](#)

For POST/PUT requests, the body is available under `msg.req.body`. This uses the [Express bodyParser middleware](#) to parse the content to a JSON object.

By default, this expects the body of the request to be url encoded:

```
foo=bar&this=that
```

To send JSON encoded data to the node, the content-type header of the request must be set to
